Body identified, police ask public for information

Redwater RCMP and the RCMP Major Crimes Unit (MCU) continue to investigate the incident of a body being found in an Opal area field and are requesting public assistance.

On Feb. 14, 2019, an autopsy was completed at the Office of the Chief Medical Examiner in Edmonton and the manner of death was a result of homicide, however no further details were provided by police.

The victim was identified as Trevor Ernest Worman, 41, of Edmonton.

Police are looking to speak with anyone who may have been in contact with Worman prior to Feb. 11, or may have noticed any suspicious persons, or vehicles near Range Road 224, a half-mile north of Highway 28 in Sturgeon County prior to this date.

If you have any information in relation to this incident, contact Redwater RCMP at 780-942-3600 or your local police.

To remain anonymous, contact Crime Stoppers at 1-800-222-8477 (TIPS), online at www.P3Tips.com or by using the “P3 Tips” app.

Sturgeon County mayor Alanna Hnatiw said her municipality has not seen much of this type of development.

Hall spoke during Gateway Research Organization (GRO) Feb. 22 update, Digging Into Local Research.

Sturgeon County mayor Alanna Hnatiw said a greenhouse would be considered Intensive Agriculture, which is a permitted use in the AG district. While the county has seen applications for intensive agriculture, she can not confirm whether or not they are for reasons to support two families to remain on a family farm.

“Sturgeon County is supportive of diversification on the farm,” Hnatiw said. “Any opportunity to evolve and sustain the family farm is a worthwhile undertaking, especially when it creates increased food security for the community and minimizes the miles food has to travel to the consumer. Sturgeon County supports agricultural uses on Ag district lands. Most districts allow for some form of additional dwelling unit to be considered on a parcel that could support these types of developments.”

Smoky Lake County CAO Cory Ollikka said his municipality has not seen much of this trend to date.

“Farm diversification can take many forms, however; and not all greenhouses are created equally,” Ollikka said. “For instance, some are used for starting seedlings only, while others grow crops through to harvest, while others grow flowers.”

He added that the prospect of more greenhouses is not a problem, but if there is an increase in the variety and type that are applied for, that may have to be addressed in the Land Use Bylaw at some point.

Thorhild County Reeve Kevin Grimetzka said his county is open for business, so he believes that if a producer makes the decision to build a greenhouse, council would encourage this type of diversification.

Would a greenhouse keep the next generation on the farm?

Agricultural Research and Extension Council of Alberta (ARECA) executive director Alan Hall said that in the past, when a farm family had children grow up and want to stay on the farm, they built a pig barn so the farm could support two families. Now people are building greenhouses to enable the farm to support two families.

“There’s been a rapid expansion in the greenhouse industry in the past three years,” Hall said. “And they’re not all cannabis.”

He explained that using LED lights created a huge reduction in power costs, so operating big greenhouses (four to 12 acres) is more affordable.

“Confinement growing is a big thing now,” he said, adding that the City of Leduc charges farm property taxes, which are lower than other property tax classes, to greenhouse operations within the city.

Hall spoke during Gateway Research Organization (GRO) Feb. 22 update, Digging Into Local Research.

Sturgeon County mayor Alanna Hnatiw said a greenhouse would be considered Intensive Agriculture, which is a permitted use in the AG district. While the county has seen applications for intensive agriculture, she can not confirm whether or not they are for reasons to support two families to remain on a family farm.

“Sturgeon County is supportive of diversification on the farm,” Hnatiw said. “Any opportunity to evolve and sustain the family farm is a worthwhile undertaking, especially when it creates increased food security for the community and minimizes the miles food has to travel to the consumer. Sturgeon County supports agricultural uses on Ag district lands. He added that the prospect of more greenhouses is not a problem, but if there is an increase in the variety and type that are applied for, that may have to be addressed in the Land Use Bylaw at some point.

Thorhild County Reeve Kevin Grimetzka said his county is open for business, so he believes that if a producer makes the decision to build a greenhouse, council would encourage this type of diversification.

Would a greenhouse keep the next generation on the farm?
Sturgeon County councillors may soon be looking for county residents to conduct a review of council salaries.

During the Feb. 26 council meeting Coun. Patrick Tighe put forward a notice of motion “That council direct the CAO to strike a citizen task force to review the elected officials remuneration and to bring back a comprehensive list of recommendations to council by June 25, 2019, that will ensure future compensation is fiscally responsible, transparent and equitable.” This motion will be considered by council during the March 12 meeting.

According to the county audited financial statements, in 2017 the mayors’ total salary, honorarium and benefits were $91,000 and in 2016 they totalled $91,500. In 2017 the six councillors received an average of $65,800 and in 2016 their average was $65,200.

In Parkland County the mayor’s 2017 salary and benefits totalled $119,300 and the average paid to the nine councillors was $77,000.

Strathcona County’s mayor received $166,000 in 2017 while the average paid to the eight councillors was $90,400.

In Thorhild County the reeve’s salary and benefits were $51,600 in 2017 and the average paid to the four councillors was $48,500.

Smoky Lake County’s reeve received $82,300 while the average paid to the four councillors was $71,900.

Tighe did not state during the meeting why he felt a salary review is required and did not respond to later inquiries by phone and email.

Sturgeon councillors are paid a salary and in addition receive $180 per day for attendance at conferences.

The annual Cost Of Living increase that staff receive is also applied to council salaries. The last time a review of council remuneration was undertaken was 2006.

2017 was a general municipal election year, so the income reflects the total for the sitting members of council that year, although one person may have served as councillor/Mayor until the October election and a different person after the election.

The 2018 council salaries are not yet available, but will be included in the audited financial statements when approved.
THORHILD SWIMMING POOL

The Thorhild Swimming Pool is a heated outdoor pool located in the Hamlet of Thorhild. It's a great facility to have fun and be active. The pool offers public swims, rentals, lessons, a variety of aquatic programs and special events. Tentative schedule of pool operation is May 21-August 23 for 2019. If you enjoy meeting new people and ensuring the water safety of both adults and children, join our team and work in a unique environment in a friendly community.

LIFEGUARDS/INSTRUCTORS

Duties and Responsibilities:
- Duration is approximately May 6–August 23, 2019
- Reports to the Pool Manager
- Public relations
- Pool supervision and control
- Chemical testing and balancing
- Facility maintenance
- Must be available daytime, evenings, weekends, and holidays
- Current security check with the vulnerable sector check at applicant’s expense, prior to employment
- Temporary full-time, temporary part-time and casual positions are available
- Attend mandatory staff training

Qualifications:
- Red Cross Water Safety Instructor
- Red Cross Lifeguard
- Standard First Aid Level C or Aquatic Emergency Care
- WHMIS

This position is included within the scope of the County’s unionized setting (IUOE Local 955). Due to the nature of the position, hours vary according to program schedules.

Position will remain open until suitable candidate is hired.

Complete details are at www.thorhildcounty.com

Please forward resumes to:
Laurie Andrushchyshyn
Payroll & Personnel Manager
Thorhild County
Box 10
Thorhild, Alberta T0A 3J0
or e-mail laurie.andrushchyshyn@thorhildcounty.com

Phone: 780-398-3741

We thank all applicants, however, only those individuals selected for interviews will be contacted.

SENIOR’S TRANSPORTATION DRIVER

Temporary-Part Time (immediate-April 30, 2019) with possible extension.

For Thorhild County residents that have low income and very basic tax returns.

Income Limits for the 2018 tax year are as follows:
- Singles up to $35,000
- Couples combined income up to $45,000
- Families with a combined income up to $52,000

A Garner Lake couple hopes an Intermunicipal Development Plan (IDP) will help protect the lake and its ever-widening shores. Heidi and Malcolm Kane were the only members of the public to attend Smoky Lake County’s public hearing on its IDP with St. Paul County. The IDP, which is a county bylaw, addresses how the two counties work together on recreation & tourism, environment, and transportation. It applies to the half-mile wide strip of land on each side of the border between the two counties (about 15 miles long) and includes almost all of the land surrounding Garner Lake.

Heidi said she hopes having the IDP means both counties will enforce no use of ATVs (all terrain vehicles) and snowmobiles on the beaches of the lake. Under the Garner Lake Area Structure Plan (ASP) and the Public Lands Act ATV use is prohibited around the lake.

“It’s an absolutely beautiful place; well, it used to be,” said Malcolm. “It’s time to pick it up, clean it up. We hope you guys do it. If not, we’ll take it to the next level. We’re not going away.”

“I’m with you regarding degrading and destroying beachfronts,” said Coun. Lorne Halisky.

When coun. Randy Otchowski asked how the Kanes’ concerns could be addressed in the IDP, Planning and Development manager Jordan Ruegg said IDPs are high level planning documents which state how the municipalities want to work together. For example, the IDP states “each municipality will endeavour to find efficiencies in bylaw enforcement through public education on recreational use near lakes and the exploration of shared bylaw services.”

“They’re very general statements, as an IDP typically is,” said Ruegg. He said the county could send bylaw enforcement there more often, but because the Garner Lake ASP does not contain any penalties for breach of the bylaw, enforcement is difficult.

“There’s no end to this merry-go-round,” said CAO Cory Ollakka, pointing out that the province has “more teeth” to enforce the Public Lands Act. “All the enforcement difficulties we’ve discussed come down to education,” he added. “The only thing we can potentially do is put more restrictions on what can and can’t happen on that type of property. Those rules would need to be met with more enforcement capacity.” He noted those actions are no issues dealt with by an IDP.

Otchowski suggested council review the issue during a committee meeting.

In a later interview Heidi said she has been trying to get someone to take action to stop the destruction at the lake for seven years. The water has receded, leaving about 300 m of mud between the water line and the old high water mark. She is frustrated because neither the provincial nor municipal governments enforce the ATV ban in the area.

“Now I feel my family is in danger,” said Heidi. “I can’t go out there without people yelling at me.”

No citizens attended the public hearing for the county’s IDP with the County of Two Hills. It covers a half mile on each side of the North Saskatchewan River for the approximately 15 miles where the river serves as the boundary between Smoky Lake and Two Hills counties.

Smoky Lake County council passed second and third readings of both IDPs during its Feb. 21 meeting.

Have You Checked Your Septic Tank?

Many rural and acreage communities in Sturgeon County are connected to a low-pressure sewer system, requiring residents to have their own two-stage septic tank and pump system. Property owner(s) are responsible for cleaning the pump/ septic system, as well as the operation, maintenance, and replacement if required. A septic system is odourless when properly maintained, but a constant foul odour, slow drains, and drains that back up are all signs that your septic tank needs pumping. Annual inspection and servicing of the pump system by a qualified professional is recommended.

How often should I have my Septic System cleaned?
The Alberta Safety Codes recommends regular removal of the solid waste, every year, but varies depending on tank size, the volume of wastewater, and how many solids go into it. Vacuum-pumped sewage hauling trucks are available for hire to clean septic tanks without spillage.

What happens if I don’t maintain my septic system?
Hydrogen Sulfide (H2S) gas can build up and prematurely degrade the septic tank. With regular maintenance, a septic system should have a life of 15-20 years. Routine pumping can help prevent system failure and increase the longevity of your system.

Agriculture Producers Survey

Sturgeon County has an opportunity to collaborate with ALUS Canada on its community-developed and farmer-delivered programs. ALUS was originally an acronym for “Alternative Land Use Services,” reflecting the concept that farmers can use their land in an alternative way to produce ecosystem services that benefit Canadians on Canadian farmland.

Here are a few examples of the kind of projects ALUS supports:
- Projects for expanded riparian buffer zones that provide critical wildlife habitat and improve water quality.
- Projects for new, enhanced or restored native prairie that enhances natural grazing, haying options, and critical habitat for species at risk.

Does this sound like a program you’d be interested in?
Go to sturgeoncounty.ca/ALUS for more information and complete the survey to help us decide if pursuing a Sturgeon County ALUS program would be beneficial to our producers.

Spring Planting Workshop

Wednesday, March 13 from 6-8 p.m. Rendezvous Centre
Reserve your seat before March 11, 2019. Space is limited.

Formerly the Shelterbelt Workshop, Agriculture Services is hosting the free Planting for the Future Workshop. We didn’t just change the name, we’ve expanded the content. Now you can learn about:
- Shelterbelt planning.
- Site preparation and seedling planting for shelterbelts.
- Planting eco-buffers as an alternative.
- The importance of riparian planting and execution.
- Interactive site assessment using aerials of your own property.

Everyone is welcome, however, only Sturgeon County residents attending this workshop will receive a $25 coupon that can be used towards the Sturgeon County Tree Program. Please note that coupons are limited to one per residence.

The Sturgeon County Tree program opens March 14. This session is your first chance to see the list of species available for 2019.

In 1951 this crew at the Epicure Cafe (Blue Jay Cafe) was open 24 hours a day seven days a week, feeding Drilling Rig Crews working around Smoky Lake.

--Gavinchuk Photo courtesy of Olga Kokotilo

Town of Smoky Lake mayor Hank Holowaychuk said that today Savanna Rig 428 is the only rig drilling in the area.

Upright permanent markers (grave headstones) are again allowed in the Redwater Cemetery. Council approved that change to the town’s Cemetery Bylaw with the stipulation that if an upright marker is desired, it must have a flat foundation level to the ground that provides at least five inches of flat surface around the upright marker to ensure ease of ground maintenance and the integrity of the marker. Corporate Services manager Diane Pysmeny said this change was made in response to requests from the public. Timelines in the bylaw are also specified. Advising the municipality of installation of a permanent marker was changed from four to three business days. Orders for weekday interments are still required to be made three business days before the interment is to take place except in emergent situations. Mayor Mel Smith said having those timelines stated in the bylaw is important for residents as well as town staff. “The last thing we want is a family or a person in grief coming and demanding something we can’t give,” he said. Council passed second and third readings of the amended Cemetery Bylaw Feb. 19. Since the town’s Cemetery Bylaw was passed in September 2013 only flat permanent markers were allowed.

Fed steer and hay markets update

A number of factors have been affecting recent fed steer and hay markets. Jason Wood, provincial livestock market analyst with Alberta Agriculture and Forestry, has an update.

Wood says that the Canfax reported price for Alberta fed, or slaughter, steers averaged just over $151 per cwt for the week ending February 8, 2019. That price is down $9 per cwt— or about $121 for a 1,350 lb. steer— since the start of year.

“A number of market factors are at play, including seasonally slower beef demand and reports of an estimated five per cent decline in year-over-year U.S. beef exports,” adds Wood. “Currently, the estimated Alberta projected futures price for fed steers works out to just under $170 per cwt for May, then we will see softer prices in the high $140s into the fall.”

Looking at the hay market, Wood says that the average provincial hay price in January was $153 per ton or just over 7.6 cents per lb. based on a 50 per cent alfalfa mix. “The January price is six per cent higher than a year ago and 37 per cent higher than the five-year average.”

Prices in the fourth quarter of 2018 differed from region to region in the province, explains Wood. “Grass and alfalfa hay were reported lower in price in the northern Alberta— dependent on quality. Grass hay prices were reported from just under 6 cents per lb. in the north to around 10.5 cents per lb. in southern Alberta. Alfalfa hay prices ranged from just under 7 cents per lb. in the north to 11 cents per lb. in the south.”

For more information about these markets, contact Jason Wood at 780-422-3122.

Bull Sale ROUND-UP

The Government of Canada has released the final list of designated regions where livestock tax deferral has been authorized for 2018 due to drought conditions in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec and New Brunswick. On September 14, 2018, the Government announced the initial list of prescribed regions in British Columbia, Alberta, Saskatchewan, Manitoba, and Quebec eligible for livestock tax deferral. A second designation of eligible regions was made on October 31, 2018. The livestock tax deferral provision allows producers in prescribed drought or excess moisture regions to defer a portion of their 2018 sale proceeds of breeding livestock until 2019 to help replenish the herd. The cost of replacing the animals in 2019 will offset the deferred income, thereby reducing the tax burden associated with the original sale.

Eligibility for the tax deferral is limited to those producers located inside the prescribed areas. Producers in those regions can request the tax deferral when filing their 2018 income tax returns.

Lakeland Agricultural Research Association (LARA) shared its 2018 local research trial results as well as information on farm support programs during its annual update Feb. 26.

“We’re a source of local, unbiased agricultural research,” said LARA manager Alyssa Krone. “Our goal is to provide information for producers to make good farming decisions.”

One of the new programs in 2018 was expansion of the regional annual silage trials from five blocks to six. The 2018 silage bales include 12 varieties of barley, nine of oats, five of triticale, nine pulses, 12 varieties of winter-spring intercropping and 10 varieties of crop alternatives.

Cropping program co-ordinator Dustin Roth said a core will be taken from the silage bales every year for five years to test their lasting quality.

Also new this year were quinoa demonstration plots.

“Quinoa is probably the worst crop to grow,” said Roth. “It was a wreck.” He shrugged and added, “That’s why we’re growing it ... to do research.” He passed around a jar of quinoa seed they harvested.

Krone said they will do more quinoa trials this year. She noted that anyone tasting quinoa in the field (or from the sample jar) should rub off the bitter outer seed coating.

LARA grew regional variety trials near Smoky Lake, St. Paul and Fort Kent (southwest of Cold Lake). Trials included a variety of cereals, pulses (the faba beans froze this year), canola, forages and pasture. Krone said one of the main reasons people are putting a mix of varieties into forage is to improve soil health. Another is to use alternate forages to provide livestock with required minerals.

Yvonne Weinmeier gave a presentation on AFSC insurance programs and LARA Environmental Program co-ordinator Kellie Nichiporuk and East Alberta Region Farm Energy outreach officer Rongrong Xiang provided grant program information.

The 2018 pasture program had close to 400 heifers on the 2,000 acre pasture.

Over 20 environment and extension events were held, with more than 700 people attending events ranging from watering systems tours and cover crops to grant funding workshops and farm succession to watershed monitoring. The horticulture program included potatoes, corn and a dozen herbs.

Classroom agricultural programs reached 300 students while 200 students participated in the Walking With Moose and Xtreme Science programs.

Farm research organization also provides support programs

--photo by Ann Hall
Research associations can help farmers access grants

There is grant money available for agricultural projects, and farmer organizations such as the Gateway Research Organization (GRO) and Lakeland Agricultural Research Association (LARA) are urging producers to access the dollars they qualify for.

Open for grant applications are the Farm Energy and Agri-Processing programs and Canadian Agriculture Partnerships (CAP) program. “As much as the money in the programs,” urged LARA manager Alyssa Korne.

GRO Farm Energy outreach officer Amber Kenyon shared grant information during the GRO Feb. 22 update while LARA Environmental Program coordinator Kellie Nichiporik and East Alberta Region Farm Energy outreach officer Rongrong Xiang provided grant program information at the LARA update Feb. 26.

Kenyon pointed out that although the energy efficiency program is geared towards reducing greenhouse gases, the changes required to do that result in farms saving a lot of money.

The Farm Energy and Agri-Processing plan is retro-active to April 2016 and can be applied to for projects that are already completed if they fall within the guidelines. Items that qualify for funding include lights, livestock waterers, insulation, variable speed drives, grain dryer components and combined heat and power units.

The programs may cover 50 percent of the cost of an expensive, energy efficient product, thereby bringing it to the price range of less expensive, less efficient products. The cost of a farm energy audit is 50 percent grantable up to $9,000.

Each person may apply for projects to a maximum of $25,000 over the life of the grant program. It runs to 2020 with funds dispersed on a first-come-first-served basis.

The On-farm Solar Photovoltaics (PV) program, funded by Alberta Agriculture, is retro-active to April 2017. Its regulations include specifics such as being contractor installed, grid tied, approved under the Alberta micro-generation legislation and being installed on a distribution rate class farm.

Thorhild County producer and GRO director Janine Paly asked if an Environmental Farm Plan (EFP) is required to qualify for this program. Kenyon said it is not, but the costs for house and farm power use need to be separated.

Nichiporik added CAP is a five-year program that replaced Growing Forward 2. Unlike the programs previously discussed, CAP is not retro-active. Grant approval must be received before any project begins. Also unlike the previous CAP programs previously discussed, CAP is not retro-active to previous programs, which replaced Growing Forward 2. Unlike the previous CAP programs previously discussed, CAP is not retro-active to previous programs.

For farm water supply the grant can be one-third of the cost up to $5,000. Wells are much easier to get approved than dugouts.

“Dugouts are going to be incredibly hard to get approved,” Nichiporik said, “especially if you want to put them in low land.”

CAP will contribute to pasturing watering systems, fines, ditches, farm water source completion, cisterns, aeration, and off-source water. The Special Incentives section of CAP may be applied to well pit conversion, water use meters, water level monitors, wetland assessments and well decommissioning up to 20 wells.

“This is a great way to protect your water sources,” said Nichiporik.

CAP environmental stewardship grants can cover part of year round watering systems, grazing management strategies, variable rate drives, relocation of a livestock facility (away from a riparian area) or creation of a permanent winter area and riparian area fencing and management
